Foreword to the Third Edition

Sixty years ago UNESCO led the charge in publishing the first edition of *World Braille Usage*. The initial effort was focused on the establishment of a universal, worldwide code. While there is still interest in universal agreement on characters that are used throughout the world, the emphasis now is on unification within languages, as driven by braille authorities and other organizations. Many new countries have adopted official codes, and countries with shared languages have formed coalitions to assess current usage and craft recommendations for the future. The International Council on English Braille (ICEB), for example, brought together Australia, Canada, New Zealand, Nigeria, South Africa, the United Kingdom, and the United States to develop a Unified English Braille Code (UEB) for both technical and literary purposes, which the final member nation recently adopted. Meanwhile, the Braille Music Code has been internationally standardized since the 1990s.

Braille, as the world's pre-eminent system of touch reading and writing used by people who are blind, continues to be a vital tool of literacy. Allowing immediate and direct access to written communication, braille has broadened from a method for reading embossed books to a multimodal tool encompassing a myriad of uses, from braille signage and product labeling to refreshable braille displays. As a tool for writing, it also allows a person who is blind to easily record accurate information and access that information quickly for later use.

All this is made possible by the establishment of braille codes: standardized, agreed-upon ways of representing characters and arranging text for maximum comprehension. As braille authorities—entities organized to formulate and promulgate braille codes—have become prevalent throughout the world, the foundation of braille has become strengthened. Although braille authorities take many forms, from government agencies to consortiums of interested organizations, their influence is wide-ranging. The codes they develop permit consistent education for people who are blind, and the advanced study of subjects such as mathematics, science, and other languages. Many authorities also take on the task of promoting braille literacy, as well as instruction, production, and distribution.

Despite dire predictions of its demise, braille continues to develop as a vibrant means of communication that enables people who are blind to participate in society, pursue educational opportunities, attain commensurate employment, and enjoy the many activities of everyday life. Standardization has given braille a firmer foundation than it has had before now—and technology has transformed the ways in which it is both produced and accessed. Braille translation software, while it does not completely replace the human transcriber, allows text to be encoded quickly for embossing, or displayed on a refreshable braille device. DAISY and other standards have streamlined the alternative text production process through the use of mark-up languages, an area rife with possibilities for future development in incorporating braille. Embossing technology has continued to improve, producing machines that can print hundreds of cells per second.

In developed countries, more and more braille readers are shifting much of their reading to refreshable braille displays, which make lengthy braille works practical and portable, and allow braille readers to interface with computers, smart phones, and the other accoutrements of the

twenty-first century. Refreshable braille displays have made the use of 8-dot codes more prevalent now than when they were used for only a few specialized purposes. With 256 possible combinations, 8-dot codes allow a much wider variety of characters to be represented by a unique cell, making interaction with computers more straightforward. There is as yet no international standard for 8-dot braille, but many systems use the seventh dot to mark uppercase characters or use one of the extra dots to display where the cursor is on the screen. Several organizations are currently working to develop specialized 8-dot codes that directly address the needs of math and science users, and it is possible we will see standardization in those areas in the future.

8-dot code is not the only aspect of braille that is still evolving and shifting. While international standardization and unification are on the rise, there are also many new braille codes being developed as a result of geopolitical changes and improved recognition of linguistic diversity. Some countries have resisted standardization, while other language codes remain basically uncontracted braille with few, if any, rules, due to lack of development or organizational authority. With the support of the Latin American Union of the Blind (ULAC) and other organizations, there has been some effort to create codes for indigenous languages, but few such codes have been officially adopted. Meanwhile, refreshable braille displays and other modern technologies remain out of reach for many braille readers around the world due to their expense. Until production costs are reduced, the slate and stylus will remain the primary tool of braille literacy for these people, allowing them to inexpensively write and read what has been written.

In short, the world of braille remains in flux. Developed with support from Perkins, the International Council on English Braille, and the National Library Service for the Blind and Physically Handicapped, this third edition of *World Braille Usage* attempts to document the current state of braille around the world. But many changes and innovations—both technological and political—remain on the horizon. We hope that the trend toward codifying additional languages, standardizing current codes, and developing new tools for access will continue, making braille literacy accessible in every native tongue to people who are blind.

Acknowledgements

Three collaborating organizations, Perkins, the National Library Service for the Blind and Physically Handicapped, Library of Congress (NLS) and the International Council on English Braille (ICEB), dedicate this newest edition of *World Braille Usage* to the millions of braille users, teachers, producers, and organizations, past and present, who tirelessly advance equal and global access to literacy and greater independence for persons who are blind, through the use of braille.

World Braille Usage, Third Edition, is built upon the firm foundation of those who have labored on behalf of braille literacy and the success they have achieved in prior editions. UNESCO has been instrumental in recognizing that literacy is a fundamental human right. Without UNESCO's vision and support in publishing the first two editions of *World Braille Usage*, this third edition would not have been possible. In addition, the International Phonetic Association developed the phonetic chart, which was the cornerstone of the first edition, and continues to be the seminal tool through which new languages can be translated into braille.

Many other braille-related organizations deserve thanks for their contributions to this project, including the World Blind Union, the International Council for Education of People with Visual Impairment, the Latin American Braille Council of ULAC (Comisión Braille Latinoamericana), Duxbury Systems, and the Japan Braille Library, authors of the report *Braille in Asia*.

In addition, this publication is the product of a worldwide effort by hundreds of individuals who provided crucial information about the use of braille in their respective countries. Although too numerous to mention individually, they deserve our sincere gratitude.

Several individuals closely associated with the publication of this edition of *World Braille Usage* also deserve special acknowledgement: William Schawbel, of the Schawbel Corporation, for his generous donation that enabled Perkins to take the lead on this project; Steven Rothstein, President of Perkins, for spearheading this project and ensuring that there were adequate resources to support it; Karen Keninger, Director of NLS, for her commitment to the publication of this book; Mr. Jawahar Lal Kaul, Secretary General of the All India Confederation of the Blind, a champion of braille and of this project; Dr. Judith Dixon, Consumer Relations Officer of NLS for her contribution to both the 1990 and 2013 editions; Dr. Robert Englebretson for his generous support and the contribution of his article on the *International Phonetic Alphabet*; Kim Charlson, Director of the Braille and Talking Book Library (BTBL) at Perkins and a member of the project team who helped to guide the development of a third edition; Susan Christensen, the editor, for her consultative advice and detailed work preparing the language and braille characters in this book; and Ellen Hall, Braille Literacy Manager of Perkins, for her work developing content and coordinating efforts to publish this *Third Edition of World Braille Usage*.

The International Phonetic Alphabet

The International Phonetic Alphabet (IPA) is a system for representing precise details of pronunciation in written form. It is widely used in linguistics, clinical speech sciences, language teaching, vocal music pedagogy, accent training for actors, pronunciation guides found in many dictionaries and language textbooks, and in any endeavor where it is necessary to capture accurately the nuances of speech. The IPA itself is not a language, and it is not localized to any particular country or language group. It is developed and maintained by the International Phonetic Association, and its goal is to represent unambiguously all of the sounds in the approximately 6,000 languages spoken on earth today, including languages that have no writing system. The IPA consists of nearly 200 unique symbols: consonants, vowels, suprasegmentals, tones and word accents, diacritics, and miscellaneous symbols.

The complete, current, print IPA charts can be downloaded from the International Phonetic Association's web page at <http://www.langsci.ucl.ac.uk/ipa/ipachart.html>. These charts are freely distributable under a Creative Commons Attribution-Sharealike 3.0 Unported License, Copyright © 2005 International Phonetic Association. Complete IPA charts are also found in most introductory-level phonetics or general linguistics textbooks. The most recent, comprehensive reference work in print is *The Handbook of the International Phonetic Association: A Guide to the Use of the International Phonetic Alphabet*, published in 1999 by Cambridge University Press.

The most recent, up-to-date, braille notation of the IPA (Englebretson 2008) was produced under the auspices of the International Council on English Braille. It has been adopted by the Braille Authority of North America, and has been approved by ICEB for use alongside Unified English Braille for the transcription of phonetic and phonemic materials. It is available online in both PDF and BRF formats from <http://www.iceb.org/icebipa.htm>. The first braille volume contains a general introduction and overview, all of the IPA charts presented in tabular format, basic rules for the use of IPA Braille, and several sample passages. This volume also contains an index designed for braille transcribers, which lists the print IPA glyphs in pseudo-alphabetical order along with the corresponding braille symbols. The second braille volume consists of swell-paper tactile illustrations of each print IPA symbol along with its braille equivalent.

IPA Braille is summarized in a journal article targeting professional phoneticians and linguists (Englebretson 2009). This article presents a detailed history of other braille notations of the IPA, gives a thorough overview of the steps and rationale which led to the development of the current IPA Braille system, and presents all of the IPA Braille symbols in chart form for the benefit of sighted phoneticians and teachers who wish to learn IPA Braille or who are currently working with braille-reading students.

Introduction to Country Listings

Welcome to *World Braille Usage*. This third edition of *World Braille Usage* has been made possible by hundreds of people who use and produce braille throughout the world. As a result, it captures a new perspective on the global use of braille. Unlike previous editions, this one includes links to electronic media, and a digital copy can be found online on the Perkins website: www.perkins.org/worldbraille.

How this book is organized:

- The 142 countries represented in this book are listed in alphabetical order.
- This book includes 133 languages that have been transcribed into 137 different braille alphabet and punctuation codes. [Nepali, Tamil, and Urdu are transcribed in two countries, but each has different braille codes, and there are two codes for Greek]
- In countries where multiple languages have been transcribed into braille, the languages are listed in order of predominance of use.
- The braille alphabet and punctuation codes for languages that are used in a single country appear only once, on the page for that country.
- The braille alphabets for languages that are used in two or more countries are cross-referenced on country pages, e.g. **Spanish Alphabet:** see *Spanish*, page 201. These alphabets and punctuation codes are contained in the section titled, *Braille Alphabets Used in Multiple Countries*, which follows the country pages.
- The braille and alphabet and punctuation code for Esperanto, a language that is not associated with a country can be found in *Braille Alphabets Used in Multiple Countries*.
- The *Index by Language Name* contains the names all of the languages represented in this book.

The majority of the data collected to create the contents of this book came from two primary sources: a questionnaire sent to representatives of braille-related organizations in 197 countries between April 2012 and April 2013; and the 1990 edition of *World Braille Usage*. Additionally, some of the data for this book was sourced with the support provided by Duxbury Systems.

Data sourced from the questionnaire: The information provided by the various participating countries may vary. Although every effort was made to ensure that the information presented in this book was verified as correct, the content of this book is based upon the information provided by the returned questionnaires and follow-up communications prior to publication. Not all countries were able to verify their respective information prior to publication.

Data sourced from *World Braille Usage, 1990*: A number of countries that appeared in the 1990 edition did not respond to the questionnaire during the information data gathering phase. The source of information given for these countries, and the languages they use, is cited as: *World Braille Usage, 1990*. A number of countries that didn't respond were formally part of the Soviet Union or Yugoslavia, or changed names, and this information is also indicated by sourcing *World Braille Usage, 1990*.

Mathematics and Chemistry Notation:

Miklós Bánó dr. & Géza Ambrózy, *Braille Codes in Mathematics and Chemistry*, 1952

Hungarian Alphabet: See *Hungarian*, page 188

Iceland

Languages: Icelandic (uncontracted)

English (uncontracted) and Danish (uncontracted) for foreign language requirement

German (uncontracted), Spanish (uncontracted), or French (uncontracted) for option third language

All foreign textbooks scanned and embossed in Grade 0 (uncontracted code), sometimes with improvisation (discussions in Iceland to change this and start teaching contracted braille codes for a given language)

Will likely adopt Unified English Braille at a later date

Braille Standards Set by:

Icelandic Braille Authority (IBA)

Iceland National Institute for the Visually Impaired

<http://www.midstod.is/english/the-icelandic-braille-committee/>

Literary Notation:

IceBraille, 2010 (Icelandic Braille Standard)

Mathematics and Science Notation:

Evaluating codes at this time, will most likely go with Nemeth and, possibly, raw LaTeX source code, depending on student preferences

Computer Notation:

8-dot IceBraille

Music Notation:

New International Manual of Braille Music Notation, WBU, 1996

English Alphabet: See *English*, page 175

Danish Alphabet: See *Danish*, page 173

German Alphabet: See *German*, page 182

Spanish Alphabet: See *Spanish*, page 201

French Alphabet: See *French*, page 180

Alphabet: Icelandic

India

Languages: Hindi (Official Language of India), English (contracted), Tamil, Marathi, Gujarati, Bengali, Kannada, Punjabi, Assamese, Malayalam, Nepali, Oriya, Telugu, Urdu

Bharati Braille Code is the collective name given to the all the languages of India.

Contractions have been prepared for Hindi, Oriya, Bengali, Gujarati, Marathi, Telugu, Tamil, and Malayalam but they are not widely used.

Braille Standards Set by:

National Institute for the Visually Handicapped (NIVH), Rajpur Road, Dehradun, Uttarakhand State is responsible for standardization of braille codes through its Braille Development Unit. In the year 2008 the Government of India constituted the “Braille Council of India.” NIVH is serving as its Secretariat.

Literary Notation:

Bharati Braille, April, 1951, (Name of the language concerned is preceded by the phrase “Bharati Braille”), viz. Bharati Braille (Hindi), Bharati Braille (Assamese), etc.

Mathematics Notation:

Braille Mathematics and Science Code for India, 1989

Music Notation:

The Braille Code for Hindustani Sangeet, 1982

Braille notation for Carnatik Music, 2008

United Kingdom (England, Northern Ireland, Scotland, Wales)

Languages: English (contracted), Irish Gaelic (contracted), Welsh Gaelic (contracted)

There is no formal code for Scottish Gaelic. The suggested format is to use Grade 1 (uncontracted) Unified English Braille, using the appropriate accented letters.

Unified English Braille (UEB) has been adopted, but is not implemented at this time. (Most school children should be using UEB for literary braille by school year end 2015/2016, all state exams in SEB and UEB. For general readers the transition to UEB will be complete by December 2015.)

English

Notes: English codes are based in the United Kingdom (UKAFF, previously Braille Authority of the United Kingdom, BAUK); the United States (Braille Authority of North America, BANA); and International Council on English Braille (ICEB) with Unified English Braille (UEB). The alphabet is the same in all English codes. The primary punctuation marks are the same for UKAFF and BANA codes, with differences in punctuation names. Contractions and usage vary between UKAFF, BANA, and UEB. UEB includes a number of distinctive differences.

Verified UEB countries (current or transitioning): Australia, Canada, Hong Kong, Iceland, New Zealand, Nigeria, South Africa, United Kingdom, United States, Zimbabwe

Primary language transcribed: Antigua and Barbuda, Australia, Bahamas, Barbados, Bhutan, Canada, Dominica, Gambia, Ghana, Grenada, Hong Kong, Ireland, Jamaica, Kenya, Liberia, Mauritius, New Zealand, Nigeria, Pakistan, Papua New Guinea, Philippines, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Samoa, Seychelles, Sierra Leone, Singapore, South Africa, Trinidad and Tobago, Uganda, United Kingdom, United States, Zambia, Zimbabwe

Secondary language transcribed: Bahrain, Cameroon, Congo, Iceland, India, Indonesia, Iran, Israel, Jordan, Kuwait, Lebanon, Luxembourg, Malaysia, Nepal, Saudi Arabia, Serbia, Sri Lanka, Taiwan, Thailand, Tibet, United Arab Emirates

Esperanto

Esperanto is an international auxiliary language. It is not the official language of any country. It is spoken in more than one hundred countries.

<http://libe.narzan.com/>

Esperanta stenografio, Nizhny Novgorod 2003, is a reference for contracted braille, which has limited use.

French

Notes: An international expert group worked from 2002 to 2008 on the *Code Braille Français Uniformisé* (CBFU). It was created according to an international agreement signed at Casablanca, Morocco on 7th June 2001 by representatives from French-speaking Africa, Belgium, France, Switzerland, and Quebec. The Quebecker edition of the CBFU is quite similar according to the tables and rules, but there are differences in the examples to take the local differences into account. The CBFU was adopted by the international expert group in 2006. This Code was completed with new symbols and a 2nd edition was issued in September, 2008. It is a standard project signed and applied by all French-speaking countries.

Greek (International)

International Greek is used in most countries outside of Greece and Cyprus. The international alphabetic characters are universal, but some other signs are not. The single accented letters may be used in some countries, while others use 2-cell characters. Both options are represented in the charts. International Greek is uncontracted.

Alphabet: Greek (International)
